Report Overview

Phosphating primer is a type of conversion coating primer used in the surface preparation and protection of metal surfaces. It is specifically formulated to provide a durable, corrosion-resistant coating that enhances the adhesion of subsequent paint or coating layers. The primer contains phosphoric acid and other chemical components that react with the metal surface, forming a thin, crystalline layer of iron or zinc phosphate. This layer not only serves as a barrier against corrosion but also promotes better adhesion and durability of the topcoat. Phosphating primers are commonly used in various industries, including automotive, aerospace, and construction, to ensure long-lasting protection and improved performance of metal components.
