Abstracts

Photovoltaic grid-connected solution refers to a solution that connects a solar photovoltaic (PV) system to the public grid, enabling self-consumption and excess power to be sold back to the grid. The Photovoltaic grid-connected system uses inverters to convert DC power to AC power which works in sync with the public grid. The electricity generated is then supplied to households or commercial/industrial facilities, while excess electricity is fed back into the grid and subsidized or sold, in accordance with national policies. Photovoltaic grid-connected solutions can improve the economic benefits of solar power generation systems, reduce dependence on the public grid, and have advantages such as being environmentally friendly, energy-saving, and sustainable, making them widely used in households, commercial, and industrial fields.

The global Photovoltaic Grid Connected Solution market size was estimated at USD 789.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
