## Abstracts

XBC (cross-finger back contact cell) technology is a type of N-type high-efficiency photovoltaic cell technology. It eliminates the front metal electrode structure, has no grid lines on the front of the cell, has 'zero shielding' on the front of the module, has no silver paste printing costs, and has unparalleled beauty in pure black modules. Its higher efficiency achieves higher power generation, giving XBC cells an absolute advantage in distributed photovoltaics and will become the mainstream of the industry in the future. However, for a long time, the expansion and promotion of XBC cell technology has been greatly restricted due to the complexity of cell processes and equipment.

The global Photovoltaic Xbc Tabber And Stringer market size was estimated at USD 1250.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
