### Report Overview

Phytogetic poultry feed additives are natural plant-derived compounds incorporated into poultry diets to enhance growth performance, improve feed efficiency, boost immunity, and reduce reliance on antibiotics. These additives typically include herbs, spices, essential oils, oleoresins, and other bioactive plant extracts known for their antimicrobial, anti-inflammatory, antioxidant, and digestive-stimulating properties. Unlike synthetic additives, phytogetics appeal to the growing demand for sustainable and antibiotic-free poultry production, aligning with global regulatory shifts restricting antibiotic growth promoters (AGPs). Their multifunctional benefits?ranging from pathogen control to stress reduction?make them a key component in modern poultry nutrition strategies, particularly in regions emphasizing organic and eco-friendly farming practices. The market is driven by increasing consumer preference for chemical-free meat products, rising concerns over antimicrobial resistance, and the poultry industry's focus on optimizing production efficiency while meeting stringent food safety standards.
