When inspecting tanks, the robot uses a sediment removal system to remove sediment from the bottom of the tank, then scans the bottom of the tank using a phased array ultrasonic testing (PAUT) array. The phased array ultrasonic array then scans the bottom of the tank to measure thickness, collecting 18,000 A-Scan scans for every square foot covered. The data is reviewed in real time by an operator to ensure data collection and quality. The robot, along with its accompanying three-person team, can inspect above-ground tanks containing petroleum, diesel, jet fuel, gasoline, ethanol, water, and other liquids.

The global Pipeline And Tank Inspection Robots market size was estimated at USD 345.6 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.45% during the forecast period.
