Report Overview

Placenta extract powder is a bioactive supplement derived from animal or human placental tissue, processed through lyophilization or other drying methods to concentrate proteins, peptides, growth factors, amino acids, and nutrients. It is primarily used in cosmetics, nutraceuticals, and regenerative medicine for its purported anti-aging, skin-rejuvenating, and immune-boosting properties. The market for placenta extract powder is driven by increasing demand for natural and bioactive ingredients in personal care and wellness products, particularly in Asia-Pacific regions like Japan, South Korea, and China, where it has been traditionally utilized in beauty and health supplements.
