Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Plasma Transferred Arc (PTA) Powders competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Plasma Transferred Arc (PTA) Powders are welding materials used in the PTA welding process. PTA welding is a high-energy-density heat source welding technology that uses a plasma arc to generate high temperatures, heat the welding material until it melts, and spray it onto the surface of the workpiece to form a coating or repair the workpiece. PTA powder is mixed with base metal powder and additive powder through powder spraying equipment and sprayed through PTA welding equipment. During the PTA welding process, the plasma arc generates high temperatures, causing the sprayed powder to melt and spray onto the surface of the workpiece, forming a dense, wear-resistant coating. Currently, the typical models of Plasma Transferred Arc (PTA) Powders include Hognas's Surfite series, etc. The Plasma Transferred Arc (PTA) Powders market is growing steadily due to increased demand for high-performance surface coating solutions in industries such as aerospace, automotive, oil & gas, and power generation. PTA powders, often composed of materials like tungsten carbide, nickel-based alloys, and cobalt-based alloys, are essential for enhancing wear resistance, corrosion resistance, and thermal stability of metal components. The rising focus on extending the lifespan of industrial parts and reducing maintenance costs is driving adoption of PTA technology. Additionally, advancements in powder metallurgy and thermal spray techniques are broadening application possibilities, further supporting market expansion globally.

The global Plasma Transferred Arc (PTA) Powders market size was estimated at USD 65.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR)
