### Report Overview

A plastic pyrolysis system is a technology designed to convert plastic waste into valuable products through a process called pyrolysis. In this system, plastic materials are heated in the absence of oxygen, causing them to undergo thermal decomposition. This results in the production of liquid and gaseous products, commonly referred to as pyrolysis oil or bio-oil, which can be used as fuel or further refined. The process helps address plastic pollution by providing an environmentally friendly method to convert plastic waste into useful resources, contributing to waste reduction and resource recovery efforts.
