Abstracts

A Plate-fin Total Heat Exchanger (PFHE) is a type of heat exchanger used in various industries for efficient heat transfer between two fluid streams while minimizing size and weight. It consists of multiple layers of corrugated metal plates with alternating flat and corrugated layers, which are stacked and brazed or welded together. The fluid streams flow through separate channels formed by these plates. The corrugated layers create turbulence in the fluid flow, enhancing heat transfer efficiency. Rapid industrialization, especially in emerging economies, increases the demand for heat exchange equipment in sectors like power generation, chemical processing, and manufacturing. PFHEs, with their compact design and high heat transfer capabilities, cater well to these expanding industries.

The global Plate-fin Total Heat Exchanger market size was estimated at USD 761.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
