Report Overview

A Plate Milk Cooler is a specialized refrigeration unit designed for the dairy industry, specifically to cool and store milk at optimal temperatures. This product typically features a stainless steel plate heat exchanger, which efficiently cools the milk by transferring heat from the milk to the cooling medium, usually a refrigerant. The cooler is designed to rapidly reduce the temperature of freshly collected milk to around 4°C (39°F) or lower to inhibit bacterial growth and extend the product's shelf life. Plate Milk Coolers are crucial in maintaining the quality and safety of milk products, ensuring that they meet industry standards before further processing or distribution. These coolers are known for their high heat transfer efficiency, ease of cleaning, and ability to handle large volumes of milk, making them an essential piece of equipment in dairy processing facilities.
