Abstracts

Resistance thermometers, also called resistance temperature detectors (RTDs), are sensors used to measure temperature. Many RTD elements consist of a length of fine wire wrapped around a ceramic or glass core but other constructions are also used. The RTD wire is a pure material, typically platinum, nickel, or copper. The material has an accurate resistance/temperature relationship which is used to provide an indication of temperature. As RTD elements are fragile, they are often housed in protective probes. This report focus on Platinum Temperature Sensors market. Platinum as a Temperature Sensor A platinum RTD element is a thermal resistor ? a resistor with a value that changes by a predictable amount in response to temperature changes. Platinum RTD elements have a positive temperature coefficient (PTC), meaning the resistance increases with increasing temperature. A virtually linear change in resistance, coupled with intrinsic chemical and temperature resistance, makes platinum an ideal base material for temperature sensing. Temperature sensors are used to measure physical, chemical, or biological quantities with accuracy and repeatability. Their reliability has resulted in widespread adoption and use across various industries ranging from healthcare to infrastructure to manufacturing. Furthermore, infrastructure systems such as smart grids, smart homes, smart water networks, and intelligent transportation connect through the concept of the Internet of Things (IoT), where there is extensive use of sensors. The prominent factors that drive the temperature sensor market size include surge in penetration of the Internet of Things & Industry 4.0, increase in trend of industrial automation. Sensor technology is indispensable to a broad range of industries, providing critical information about temperature sensors which can have a profound impact on a number of processes or systems. In the modern era, Industry 4.0 improves manufacturing and industrial automation across different industry verticals.

The global Platinum Temperature Sensors market size was estimated at USD 1049.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
