Report Overview

The pleated activated carbon filter is a specialized air or liquid filtration component designed to remove contaminants, odors, and volatile organic compounds (VOCs) through adsorption. It consists of a pleated fabric or fiber medium infused with activated carbon, which increases surface area for enhanced filtration efficiency. These filters are widely used in HVAC systems, water purification, automotive air filters, and industrial applications due to their ability to trap microscopic particles and gaseous pollutants. The pleated design improves airflow resistance while maintaining high filtration capacity, making them more effective than flat carbon filters. Their performance depends on factors such as carbon quality, pore structure, and contact time with the filtered medium. With growing concerns over indoor air quality and environmental pollution, demand for pleated activated carbon filters has expanded across residential, commercial, and industrial sectors.
