Pneumatic optical tables (sometimes called air tables) use pressurised air supports, which provide better isolation from floor vibrations than rigid supports. Most vibration sources in a lab are in this frequency range, so these stands are suitable for many labs. The pressurised support can be in the form of a frame with casters or four individual cylindrical legs.

The global Pneumatically Isolated Optical Tables market size was estimated at USD 285.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
