Report Overview

Point-of-Care (POC) or Rapid Diagnostics refers to a medical testing approach that enables healthcare professionals to perform diagnostic tests at or near the patient's location, typically outside of a traditional laboratory setting. This method offers quick results, often within minutes, and is designed to facilitate immediate decision-making and treatment. POC testing is particularly valuable in emergency situations, remote locations, or resource-limited environments where access to centralized laboratory services is limited or time-consuming. The technology used in POC testing can range from simple dipstick tests to more sophisticated devices that provide quantitative results. These tests can cover a broad spectrum of medical conditions, from infectious diseases to chronic conditions, and are crucial for enhancing patient care by reducing wait times, improving treatment outcomes, and enabling more efficient use of healthcare resources.
