Report Overview

The pointer liquid level gauge is a mechanical device used to measure and display the level of liquid in tanks, vessels, or other storage systems. It operates through a float mechanism connected to a magnetic coupling, which transmits the liquid level changes to a dial or pointer display outside the tank. This design ensures accuracy while maintaining a sealed system, making it suitable for hazardous or high-pressure environments. Commonly used in industries such as oil and gas, chemical processing, water treatment, and power generation, these gauges provide reliable, real-time monitoring without requiring external power sources. Their durability, ease of installation, and minimal maintenance requirements make them a preferred choice for applications where safety and precision are critical.
