Abstracts

Polarization-sensitive Faraday isolators allow only incident light beams linearly polarized in a specific direction to pass through. Here, the collimated linearly polarized incident light first passes through the first polarizer with very small loss, then passes through a 45° Faraday rotator, and then passes through the second polarizer, whose polarization direction is also rotated compared to the first polarizer. 45°, so the loss when light passes through is still very small.

The global Polarization Sensitive Fiber Isolator market size was estimated at USD 18.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
