Report Overview

Polyalkene Glycol (PAG) grease is a high-performance lubricant synthesized from polyalkylene glycol base oils and thickened with specialized soaps or other thickeners, designed to excel in extreme conditions such as high temperatures, heavy loads, and harsh environments. Its unique molecular structure provides superior thermal stability, oxidation resistance, and low volatility, making it particularly suitable for demanding applications in automotive, industrial, and aerospace sectors, including electric vehicle components, bearings, and machinery exposed to elevated temperatures. Unlike conventional mineral oil-based greases, PAG grease exhibits excellent compatibility with elastomers and plastics while maintaining lubricity under extreme pressure, reducing wear and extending equipment lifespan. Its synthetic nature also allows for tailored formulations to meet specific performance requirements, such as reduced friction, enhanced corrosion protection, or improved energy efficiency, positioning it as a critical solution for modern high-tech and heavy-duty applications.
