Report Overview

Polydocanol Foam Sclerosant is a medical product used in the treatment of varicose veins and other venous disorders. It is a liquid sclerosant agent that is formulated from a mixture of polydocanol, a detergent agent, and air to create a foam. This foam is then injected into the affected veins, causing them to collapse and eventually be reabsorbed by the body. The foam's properties allow for better contact with the vein walls, leading to more effective sclerotherapy. Polydocanol Foam Sclerosant is considered a minimally invasive treatment option, offering patients a less painful and quicker recovery time compared to traditional surgical methods. It is administered by medical professionals, such as phlebologists or vascular surgeons, and is part of a broader range of treatments for venous insufficiency and related conditions.
