Report Overview

Polyethylene Coated Paper is a versatile packaging material that combines the benefits of paper and polyethylene. This product is created by applying a thin layer of polyethylene, a type of plastic, onto one or both sides of a paper substrate. The polyethylene coating provides a barrier against moisture, grease, and other liquids, enhancing the paper's resistance to water and making it suitable for various applications such as food packaging, industrial packaging, and protective wrapping. The coated paper maintains the recyclability and sustainability of paper while offering the added protection and durability of plastic. It is commonly used in the production of bags, envelopes, and other packaging materials where a balance between strength, protection, and eco-friendliness is required.
