### Report Overview

Polyhexamethylene biguanide (PHMB) is a polymer-based antimicrobial compound widely used as a disinfectant and preservative in various industries, including healthcare, personal care, water treatment, and wound care. Known for its broad-spectrum efficacy against bacteria, fungi, and some viruses, PHMB is valued for its low toxicity to humans and stability in formulations, making it a preferred alternative to traditional biocides like chlorhexidine or triclosan. In healthcare, it is utilized in antiseptic solutions, contact lens disinfectants, and surgical scrubs, while in personal care, it is found in cosmetics, shampoos, and wet wipes. The water treatment industry employs PHMB to control microbial growth in pools and industrial water systems, and its application in wound dressings highlights its role in infection prevention. The market for PHMB is driven by increasing hygiene awareness, stringent regulatory standards for antimicrobial agents, and the growing demand for safe and effective disinfectants, particularly in healthcare and consumer products. However, competition from alternative biocides and potential regulatory restrictions on synthetic antimicrobials could pose challenges. The expansion of applications in emerging markets and advancements in formulation technologies present growth opportunities for PHMB suppliers.
