Report Overview

Polylactic Acid Polyols (PLA Polyols) are a type of polyol, which are polymers containing multiple hydroxyl (-OH) groups. These polyols are derived from polylactic acid (PLA), a biodegradable and renewable polymer synthesized from lactic acid, which in turn is produced through the fermentation of plant-based sugars such as corn starch. PLA Polyols are used as a key component in the production of polyurethane foams, coatings, adhesives, sealants, and elastomers. They offer environmental benefits due to their renewable origin and potential to reduce carbon footprint compared to petroleum-based polyols. The use of PLA Polyols in these applications can lead to products with improved sustainability profiles, as they contribute to the development of green chemistry and the circular economy.
