Report Overview

Polymer Sulfur Coated Urea (PSCU) is a type of slow-release fertilizer that combines the nitrogen-rich properties of urea with a polymer sulfur coating. This coating serves to control the release of nitrogen into the soil, thereby reducing the risk of nitrogen loss through leaching or volatilization. PSCU is designed to provide a sustained supply of nitrogen to plants over an extended period, which can lead to improved crop yields and more efficient use of fertilizer. The polymer sulfur coating also acts as a physical barrier, protecting the urea from immediate degradation and ensuring that the nitrogen is released gradually as the coating breaks down. This product is particularly beneficial in agricultural applications where precise nutrient management is crucial for optimizing plant growth and minimizing environmental impact.

In 2024, the global Polymer Sulfur Coated Urea (PSCU) market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
