Report Overview

Polymerized Cementitious Coating (PCC) is a type of protective coating material that combines the properties of both polymers and cementitious materials. It is a composite material that is created by polymerizing cementitious components, such as cement, sand, and water, with polymers like acrylic, vinyl acetate, or epoxy resins. The resulting product offers enhanced durability, water resistance, and adhesion properties compared to traditional cementitious coatings. PCC is commonly used in construction and infrastructure applications to protect and seal concrete surfaces, providing a robust barrier against environmental factors such as water, chemicals, and UV radiation. It is particularly effective in applications where a high level of chemical resistance and mechanical strength is required, such as in industrial flooring, tank linings, and waterproofing of structures. The coating not only enhances the longevity of the underlying concrete but also improves its aesthetic appeal by providing a smooth, seamless finish.
