## Abstracts

As one of the five major engineering plastics, polyphenylene ether (PPE) resin has good flame retardancy, high temperature resistance, electrical insulation, dimensional stability and excellent physical and mechanical properties. The long-term use temperature range of PPE is  $127\sim 121^{\circ}\text{C}$ , and it has excellent dimensional stability and outstanding electrical insulation under long-term load. Therefore, it is widely used in the electronic and electrical industry, automobile industry, industrial machinery and surgical medical equipment. PPE has shortcomings such as poor processing performance and poor impact resistance. In order to improve its processing performance, researchers often combine PPE with polystyrene (PS), polyamide (PA), and polybutylene terephthalate (PBT). mix. Blending modification improves the processing properties of PPE, but also reduces its temperature resistance and flame retardancy to a certain extent. Flame retardants are often added to commercial PPE modified materials to improve their flame retardant properties.

The global Polyphenylene Ether Resin Raw Powder market size was estimated at USD 1250.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
