Abstracts

Polypropylene Fiber Pleated Filters are a type of filtration media used in air and liquid filtration systems. These filters are constructed from polypropylene fibers, which are pleated or folded to increase the available surface area for filtration. The pleats provide a larger contact area for capturing particles and contaminants, allowing for efficient removal from the air or liquid passing through the filter. Polypropylene fiber pleated filters offer excellent chemical resistance, low moisture absorption, and high dirt-holding capacity. They are commonly used in diverse applications, including HVAC systems, industrial processes, water treatment, and pharmaceutical manufacturing, to achieve reliable and effective filtration.

The global Polypropylene Fiber Pleated Filters market size was estimated at USD 3850.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
