Abstracts

Polyvinylidene fluoride (PVDF) comes in both hydrophobic and hydrophilic forms of filtration membranes, offering broad chemical compatibility. The hydrophilic membranes have significantly lower protein adsorption compared to nitrocellulose, nylon, and PTFE membranes, making them suitable for sterilizing filtration of protein solutions, tissue culture media, antibiotics, and ethanol, as well as for particle removal filtration and biological testing (such as receptor binding studies, TCA precipitation). Hydrophobic membranes are suitable for organic solvents and air filtration. Even at very low differential pressure, they ensure the unobstructed passage of moist air or other gases, while aqueous solutions cannot pass through.

The global Polyvinylidene Fluoride PvdF Membrane market size was estimated at USD 182.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
