Abstracts

The working principle of the Bluetooth thermal printer is to use a single-chip microcomputer on the host side to simulate the printer to work, intercept the data and control signals transmitted from the host parallel port, and transmit them to the printer side through the Bluetooth wireless connection. The print head is equipped with a semiconductor heating element. After the print head is heated and contacts the thermal printing paper, the desired pattern can be printed out. The principle is similar to that of a thermal fax machine.

The global Portable Bluetooth Thermal Printer market size was estimated at USD 280.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.35% during the forecast period.
