### Report Overview

The portable disposable infusion pump is a compact, single-use medical device designed to deliver fluids, such as medications or nutrients, into a patient's body in a controlled manner over a specified period. Unlike traditional infusion pumps, which are often bulky and reusable, these devices are lightweight, pre-filled, and intended for short-term use, making them ideal for outpatient care, home healthcare, and emergency settings. They typically feature battery-powered operation, programmable dosing settings, and safety mechanisms to prevent over-infusion or leakage. Their disposability reduces the risk of cross-contamination and eliminates the need for sterilization, offering convenience and hygiene advantages in clinical and non-clinical environments. The demand for such pumps is driven by the growing preference for ambulatory care, rising chronic disease prevalence, and the need for cost-effective, user-friendly solutions in resource-limited settings.
