### Report Overview

A Portable Energy Storage System (PESS) is a compact, mobile power solution designed to store and provide electricity on-the-go. It typically consists of a rechargeable battery, an inverter to convert the battery's DC power to AC power, and a control system to manage the charging and discharging processes. These systems are often used in situations where access to a stable power grid is limited or unavailable, such as during outdoor activities, emergencies, or in remote locations. PESS can be powered by various energy sources, including solar panels, generators, or by plugging into a wall outlet. They are designed to be lightweight, durable, and easy to transport, making them suitable for a wide range of applications, from camping and hiking to disaster relief and off-grid living. The capacity of a PESS can vary significantly, from small units that power a single device to larger units capable of supporting multiple appliances simultaneously.
