Report Overview

The portable single angle gloss meter is a handheld device designed to measure the glossiness of surfaces at a fixed angle, typically 60 degrees, though some models may offer 20 or 85 degrees for high-gloss or low-gloss surfaces, respectively. It operates by projecting a beam of light onto the surface at the specified angle and measuring the intensity of the reflected light, providing a numerical gloss value (measured in gloss units, GU) that quantifies surface shininess. These devices are widely used in industries such as automotive, paints and coatings, plastics, ceramics, and printing, where consistent surface finish is critical for quality control. Portable gloss meters are valued for their ease of use, rapid measurements, and ability to ensure compliance with industry standards like ASTM D523 and ISO 2813. Key features often include digital displays, internal calibration standards, and data storage capabilities, making them indispensable for on-site inspections and laboratory testing. The market for these devices is driven by increasing demand for quality assurance in manufacturing and stringent regulatory requirements for surface finish across various sectors.
