## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Portable Space Heater competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Portable space heaters are small, portable, plug-and-play electric heating devices designed for localized or temporary heating in bedrooms, offices, bathrooms, garages, RVs, or during power outages. In 2024, global Portable Space Heater production reached approximately 41,244 k units, with an average global market price of around US\$ 45 per unit. The production capacity of Portable Space Heater reaches 51,500 k units, and the industry's gross profit margin is approximately between 25% and 40%. The growth of the portable space heater market is primarily driven by both flexible heating needs and upgrades in safety and energy efficiency. On one hand, the increasing number of renters, short-term rental apartments, small-sized homes, and spaces requiring partial or no central heating (such as garages, balconies, and temporary offices) has rapidly amplified demand for portable, compact, and instant-heating heating equipment. On the other hand, fluctuating energy prices and energy conservation and emission reduction policies are pushing products to upgrade from traditional resistance wire heating to more efficient solutions such as PTC ceramic and far-infrared heating. These upgrades, coupled with safety and comfort features like anti-tipping power-off, overheat protection, flame-retardant casing, low noise, and constant temperature control, have increased consumer acceptance.

The global Portable Space Heater market size was estimated at USD 1856.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
