Report Overview

Post-Consumer Recycled Fiber (PCRf) refers to the process of collecting and repurposing used paper and cardboard products that have been discarded by consumers after their initial use. This material is then sorted, cleaned, and processed to remove contaminants before being transformed into new paper or cardboard products. The use of PCRf is an environmentally friendly practice that helps to reduce waste, conserve natural resources, and decrease the demand for virgin pulp, which is derived from trees. By incorporating PCRf into manufacturing processes, companies can contribute to a circular economy, where materials are reused and recycled, minimizing the environmental impact of their operations.
