Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Potassium Hexatitanate Whiskers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Potassium hexatitanate whiskers (generally represented by the chemical formula $K_2Ti_6O_{17}$) are a high-performance novel inorganic non-metallic whisker material, attracting significant attention due to their unique physicochemical properties, such as high strength, high modulus, good heat resistance, and chemical stability. This one-dimensional nanomaterial features a large aspect ratio and high surface activity, which can significantly improve the mechanical and thermal properties of composite materials. Raw materials include high-purity titanium sources (such as titanium dioxide and titanates) and potassium sources (such as potassium carbonate and potassium hydroxide), the quality of which directly affects the purity and performance of the whiskers. Downstream applications are mainly concentrated in friction materials and composite materials. Global sales in 2024 were approximately 700 tons, with an average market price of about US\$15 per kilogram. The scale of single-line production capacity varies depending on the production process and investment scale of production equipment, and the industry gross profit margin ranges from 15% to 28%. Potassium hexatitanate whiskers appear as white, needle-like single crystals and possess a range of excellent properties, including high strength, high elastic modulus, good wear resistance, strong heat resistance, low coefficient of thermal expansion, and excellent insulation and chemical stability. These properties make them a superior reinforcing material, significantly improving the performance of composite materials, especially wear resistance, and applicable to friction materials, heat-resistant materials, and insulating materials. The preparation of potassium hexatitanate whiskers involves precise process control, resulting in relatively high production costs. The global market

competition is dominated by a few major international manufacturers, and new entrants face certain technological and market barriers.

The global Potassium Hexatitanate Whiskers market size was estimated at USD 105.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
