### Report Overview

Potassium Sulphate Fertilizer is a type of agricultural input that combines two essential nutrients, potassium (K) and sulfur (S), to enhance crop growth and yield. This fertilizer is derived from potassium sulfate, a naturally occurring mineral compound with the chemical formula  $K_2SO_4$ . It is specifically formulated to provide plants with the necessary potassium, which plays a critical role in enzyme activation, protein synthesis, and overall plant vigor. Sulfur, on the other hand, is an essential component of certain amino acids and is vital for the synthesis of proteins, as well as for the formation of chlorophyll, which is crucial for photosynthesis. Potassium Sulphate Fertilizer is particularly beneficial for crops that are sensitive to chloride, as it is a chloride-free alternative to potassium chloride, reducing the risk of chloride toxicity in certain soil types and crops. It is widely used in various agricultural applications to improve soil fertility, enhance crop quality, and increase resistance to diseases and environmental stress.

In 2024, the global Potassium Sulphate Fertilizer market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
