Report Overview

Potter's wheels, also known as pottery wheels, are essential tools used in the pottery and ceramics industry for shaping and forming clay into various functional and decorative items. These wheels typically consist of a rotating disk or table, powered either manually or by an electric motor, which allows the potter to center and manipulate the clay while it spins. The design of a potter's wheel can vary, but they generally include a sturdy base, a wheel head for holding the clay, and a foot pedal or other control mechanism to regulate the speed of rotation.
