Report Overview

Powder Coated Busbar is an electrical conductor primarily used for power distribution and transmission in various applications such as power plants, substations, and industrial facilities. It is made from a high conductivity metal, typically copper or aluminum, which is extruded or cast into a specific shape and size. The key feature of this product is the application of a powder coating on its surface. This coating serves multiple purposes, including corrosion resistance, improved electrical insulation, and enhanced visual appeal. The powder coating is applied through an electrostatic process, where the busbar is grounded and charged particles of the coating material are attracted to its surface. Once the coating is applied, it is then cured through a heat treatment process to create a durable, hard finish. Powder Coated Busbar offers advantages such as reduced maintenance, longer service life, and improved safety due to its non-conductive surface, making it a preferred choice in environments where electrical safety is a priority.
