Report Overview

Powdered Emulsion Explosive (PEE) is a type of industrial explosive that combines the properties of both powdered and emulsion explosives. It is a high-performance blasting agent designed for use in mining, quarrying, and construction applications. PEE is formulated by mixing a base explosive material, such as ammonium nitrate, with a fuel component, usually diesel oil, and a gelling agent to create a homogeneous mixture. This results in a stable, high-density explosive that offers improved energy release and blasting performance compared to traditional explosives. The product is characterized by its ease of handling, reduced sensitivity to shock and friction, and enhanced safety features, making it a popular choice for various blasting operations.
