Report Overview

Powdered Metal Bearings, also known as sintered metal bearings or bronze bearings, are a type of bearing material made from powdered metal. This product is created by compacting metal powders, typically bronze or iron, and then sintering them at high temperatures to achieve a solid, dense structure. These bearings offer several advantages, such as high load-carrying capacity, excellent dimensional stability, and resistance to wear and corrosion. They are commonly used in applications where low friction, high precision, and long service life are required, such as in automotive, industrial machinery, and aerospace components. Powdered Metal Bearings can be designed in various shapes and sizes to fit specific engineering needs, and they are known for their self-lubricating properties, which can reduce the need for additional lubricants in certain applications.
