Report Overview

Power Battery CTP (Cell-to-Pack) technology is an advanced battery integration method that eliminates the traditional module structure, directly integrating battery cells into the pack to improve energy density, reduce weight, and lower costs. By removing intermediate components, CTP technology enhances space utilization, thermal management efficiency, and manufacturing simplicity while maintaining safety standards. It is widely adopted in electric vehicles (EVs) and energy storage systems, driven by the demand for longer driving ranges, faster charging, and cost competitiveness. Major players like CATL, BYD, and Tesla are leading innovation in this space, with increasing R&D investments and partnerships across the battery supply chain. The market is expanding rapidly due to global EV adoption, stricter emissions regulations, and advancements in lithium-ion and solid-state battery technologies. However, challenges such as thermal runaway risks, standardization issues, and recycling complexities remain critical concerns for wider commercialization.
