Abstracts

Pre-commercial modular production system is a highly flexible modular system designed for testing a variety of applications. Pilot production refers to a process in which a series of process researches are completed in the laboratory and the process of process amplification research is carried out under conditions that are basically consistent with production. It is a necessary link for the transformation of scientific and technological achievements into productivity. Pilot plants are easy to scale-up and give you the opportunity to process small-scale samples under exactly the same conditions as those generated in large-scale production facilities. As an example, it is designed to use Ammonia or Freon as the refrigerant for fat crystallization.

The global Pre Commercial Modular Production System market size was estimated at USD 285.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
