Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Presentation Scanner competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Presentation scanners are designed to be stationary and sit on the counter or be integrated into fix - mount enclosures and provide a hands - free scanning experience. The scanner offers an ?omni - directional? scan pattern that can scan from any angle. This capability provides the associate or customer a hassle - free experience as they ?present? barcodes, licenses, documents and more to the device to be automatically read. Presentation scanners are stationary scanning devices designed to read barcodes, QR codes, and other optical identifiers with hands-free operation. Typically placed on countertops or checkout desks, they feature omnidirectional scanning capabilities, allowing users to "present" coded items (e.g., products, payment codes, receipts) within the scanning range for quick and accurate recognition, widely used in retail, catering, and service industries. Self-service retail drives demand growth: With the popularity of unmanned cashier and self-service checkout systems in the retail industry, demonstration barcode scanners have become standard for front-end equipment. QR code recognition capabilities have become core competitiveness: the market has gradually transitioned from one-dimensional codes to two-dimensional codes, and scanners with high-speed decoding capabilities for two-dimensional codes are more popular. High durability and all-weather operation performance are valued: commercial scenarios have higher requirements for continuous scanning stability and anti-wear capabilities, driving the development of products to industrial levels. Emerging markets such as Southeast Asia and Latin America have become growth hotspots: the digital transformation of retail in these regions has accelerated, driving strong demand for cost-effective scanning equipment. Multi-interface and intelligent recognition

functions have become upgrade directions: the market tends to support multiple interfaces such as USB, RS232, Bluetooth, and products with functions such as automatic wake-up and intelligent recognition to improve integration convenience and user experience.

The global Presentation Scanner market size was estimated at USD 2325.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
