Abstracts

Printed Circuit Heat Exchangers (PCHE) are highly efficient and compact heat exchangers used in various industrial applications, particularly where high pressures and temperatures are involved. PCHEs are constructed using a series of chemically etched plates that create complex flow channels, which are then diffusion bonded to form a solid block. This design allows for a large surface area in a small volume, enabling effective heat transfer between fluids at different temperatures. PCHEs are known for their robustness, capable of handling extreme operating conditions, including pressures up to 800 bar and temperatures exceeding 900°C. Their efficiency and durability make them ideal for use in sectors such as power generation, oil and gas, and aerospace, where space constraints and operational demands are critical.

The global Printed Circuit Heat Exchangers Pche market size was estimated at USD 350.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.45% during the forecast period.
