### Report Overview

Fetal monitor probes are medical devices used to monitor the heart rate and uterine contractions of a fetus during pregnancy and labor, typically through external or internal methods such as ultrasound transducers, tocodynamometers (toco probes), or fetal scalp electrodes. These devices play a critical role in ensuring fetal well-being, particularly in high-risk pregnancies, by providing real-time data to healthcare providers. The market for fetal monitor probes is driven by increasing maternal age, rising prevalence of high-risk pregnancies, and advancements in non-invasive monitoring technologies.
