Report Overview

A projected magnetic compass is a type of compass used for navigation on ships. It is designed to provide accurate and reliable readings of the ship's heading by projecting the compass card onto a horizontal surface. The projected magnetic compass consists of a compass card with magnetic markings and a system of mirrors and lenses. The compass card is mounted on a gimbal system that allows it to remain level and stable even when the ship is rolling or pitching. The compass card is magnetized and aligns itself with the Earth's magnetic field, indicating the ship's heading. The compass card is projected onto a horizontal surface, such as a glass or acrylic dome, using mirrors and lenses. This projection allows the compass card to be easily read and observed from different angles and positions on the ship's bridge. The compass card is typically illuminated to ensure visibility in low light conditions. The projected magnetic compass is an important navigation instrument on ships, providing the ship's heading information to the navigator or helmsman. It is used in conjunction with other navigation instruments, such as GPS and radar, to ensure accurate and safe navigation.
