Report Overview

A prosthetic device, also known as a prosthesis, is a medical device designed to replace or restore the function of a missing or damaged body part. It is typically made from materials such as metal, plastic, or carbon fiber and is custom-fabricated to fit the individual patient's body. Prosthetic devices can be classified into two main categories: cosmetic and functional. Cosmetic prostheses primarily focus on replicating the appearance of the missing body part, while functional prostheses aim to restore the lost function and mobility. These devices can range from simple, passive devices that provide support and stability, to complex, active devices that incorporate advanced technology such as microprocessors and sensors to mimic natural movement. Prosthetic devices are used to improve the quality of life for individuals who have experienced limb loss or other physical impairments, allowing them to regain mobility, independence, and self-confidence.
