### Report Overview

PTFE Clad Copper Plate is a composite material that combines the properties of both copper and polytetrafluoroethylene (PTFE). This product features a base of copper, which is known for its excellent thermal and electrical conductivity, strength, and malleability. The copper plate is then clad or bonded with a layer of PTFE, a synthetic fluoropolymer that offers non-stick properties, chemical resistance, and high-temperature stability. The PTFE layer provides a smooth, slippery surface that resists adhesion, making it ideal for applications where materials need to slide or release easily, such as in baking molds, industrial machinery, or chemical processing equipment. The combination of these two materials results in a product that leverages the thermal and electrical benefits of copper with the non-stick and chemical-resistant advantages of PTFE, making PTFE Clad Copper Plate suitable for a wide range of industrial and commercial applications.
