### Report Overview

Public AC charging piles are stationary electric vehicle (EV) charging stations that provide alternating current (AC) power to recharge EVs, typically ranging from 3.7 kW to 22 kW in output. These units are widely deployed in public spaces such as parking lots, retail centers, and urban areas, catering to EV owners requiring slower, overnight, or destination-based charging. Unlike fast DC chargers, AC piles are cost-effective to install and maintain, making them a preferred choice for long-duration charging in high-traffic locations. The market is driven by rising EV adoption, government incentives for charging infrastructure, and urban sustainability initiatives, though challenges include grid capacity constraints and uneven regional deployment. Competition is intensifying among manufacturers, energy providers, and mobility service operators, with innovation focusing on smart connectivity, payment integration, and renewable energy compatibility.
