Report Overview

A Pull Rod Type Force Sensor is a device designed to measure the force applied along a linear axis. It consists of a Pull Rod connected to a strain gauge or load cell, which converts the applied force into an electrical signal. As force is exerted on the Pull Rod, it undergoes deformation, which alters the electrical resistance or strain on the gauge. This change is then measured and converted into a force reading. Pull Rod Type Force Sensor is widely used in various industries, such as manufacturing, automotive, and robotics, for applications requiring accurate force measurements and control.
