Abstracts

A pulsed bias voltage power supply is a type of power supply that provides a pulsed or intermittent bias voltage to a device or circuit. Bias voltage is a DC voltage that is applied to a device or circuit to establish a desired operating point or bias condition. In the case of a pulsed bias voltage power supply, the bias voltage is provided in the form of pulses or intermittent bursts of voltage. This can be useful in applications where the bias voltage needs to be periodically varied or switched on and off. Pulsed bias voltage power supplies are commonly used in various electronic devices and circuits, such as amplifiers, transistors, and lasers. They can be designed to provide different pulse widths, frequencies, and amplitudes of the bias voltage, depending on the specific requirements of the application.

The global Pulsed Bias Voltage Power Supply market size was estimated at USD 1283.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
