Report Overview

A pulsed gas laser is a laser that uses gas as the active medium to produce laser light. Unlike continuous wave gas lasers, pulsed gas lasers excite gas molecules by applying an electric field or light field in the gas medium, causing them to produce brief, pulsed lasing. The characteristic of this kind of lasing is that the pulse width is very short, usually in the nanosecond (10^{-9} seconds) or picosecond (10^{-12} seconds) level, sometimes even reaching the femtosecond (10^{-15} seconds) level.
